

Key Blanks

Shell Keys

Replacement shells/cases allow you to repair your customer's Chrysler, Toyota or Lexus integrated remote keys. Simply remove the electronics from the customer's existing key and place them in the new shell. Then duplicate the blade and you're done. It is just that easy. Sorry, the electronics are not included.

Shell Keys

A new integrated remote key is expensive. These shells permit you to offer your customers a much less expensive alternative. You can remove the electronic board from the broken key, place it in this new shell, duplicate the key and have the customer on their way in minutes while saving them big money and adding to your profits.

- Replacement shells cost only a small fraction of what a new key would cost at the dealership
- Replace broken key blades or cracked shells
- No programming is needed as you are using the customer's existing electronic board that you harvest from their damaged key.
- Shells only – no electronics included

Replacement key shells are currently available for the Chrysler, Toyota and Lexus products shown below.

Chrysler
